Introduction

As part of our final project requirements, we interviewed Engr. Gino Senosin, a graduate of the University of the Philippines Diliman who completed his studies in 2017. He has been working as a software engineer for approximately eight to nine years. The purpose of the interview was to learn about his educational background, career journey, challenges in the technology industry, and advice for students preparing for their future careers. Through his experiences, we gained a better understanding of the transition from college to professional life and the skills needed to succeed in the field of computer engineering.

Summary of the Interview

Engr. Gino Sinosin graduated with a Bachelor of Science in Computer Engineering from the University of the Philippines Diliman and has been working as a software engineer for nine years. He was inspired to pursue computer engineering because he enjoyed a programming subject in high school, and he chose UP Diliman for college primarily due to its affordable tuition.During his college years, the programming courses proved to be the most helpful in preparing him for his career. After graduation, his transition from university to the workplace was relatively smooth because the nature of the work was similar to what he had done in school. The biggest adjustment for Engr. Gino was learning the specific tools and applications used in the industry that were not covered during college. However, he noted that it is normal for companies to provide initial training to prepare new hires for their specific roles.Engr. Gino emphasized that problem-solving and critical-thinking skills are essential to succeed in this field. Furthermore, as we enter the age of AI, professionals must be able to adapt quickly to rapidly changing technology.Throughout his career, he faced challenges from the fast-paced nature of the tech industry, which he overcame by remaining adaptable and continuously learning.

Engr. Gino also shared valuable advice for college and career success.For College focus on your studies, something he admitted he personally struggled with. However, since we have not yet entered the workforce, make sure to enjoy our college years, as life becomes much more demanding once we start working. For Career he recommended finding enjoyment in work while making a continuous effort not to fall behind in industry skills.To stay competitive, he strongly advises although not everyone may agree, he strongly recommends familiarizing yourself with AI and how to use it in work because it is becoming integrated into almost every domain so we need to learn how to harness. Looking back on his journey, Engr. Gino offered one final piece of advice for future computer engineers: whenever you encounter hardships, challenges, or issues at work, view them as opportunities for personal and professional growth. Facing these difficulties helps you mature, understand how to improve, adapt to your environment, and become a better teammate and leader. Embracing hardship is ultimately an opportunity to learn.

Personal Reflection:

Almira Gamboa:

The interview taught me that becoming a successful engineer requires continuous learning, adaptability, and problem-solving. I realized that learning does not stop after graduation, especially in a field where technology constantly changes. Engr. Gino's experiences inspired me to keep improving my skills, use AI responsibly, and view challenges as opportunities to grow both personally and professionally.

Jilsen Reyes:

What struck me most from the interview was the importance of problem-solving and critical thinking in adapting to the fast-changing world of technology. The alumnus inspired me to focus on my studies, do my best, and never give up on my goals. His journey made me realize that if he could overcome challenges, I could also overcome my own difficulties as a Computer Engineering student. I also learned the importance of maturity, teamwork, and leadership, and that every challenge is an opportunity to learn and improve myself.

Sean Andrei Evangelista:

The interview taught me that success in computer engineering relies heavily on continuous learning, problem-solving, critical-thinking skills and adaptability are essential to succeed in this field. I realized that learning extends far beyond college, especially in a fast evolving tech industry. Engr. Gino's story inspired me to stay focused on my studies and view future workplace challenges as valuable opportunities for personal and professional growth to mature and learn.

Matthew Moan Cambel:

Interviewing Engr. Gino Sinosin showed me that building strong programming fundamentals in college makes transitioning into the software industry much smoother. I learned that long-term success isn't just about code, but about sharpening my problem-solving skills and staying adaptable as AI reshapes the tech landscape. Moving forward, I need to keep upskilling while enjoying my student years so I don't burn out. Most importantly, his advice reminded me to view every workplace bug or setback as an opportunity to mature into a stronger engineer and leader.

Connection to Course or Program

Engr. Gino Sinosin's experience directly aligns with our Computer Engineering curriculum, where our programming and problem-solving courses form the backbone of our future careers. His journey proves that the core algorithms, logic, and system architecture we study today are exactly what will enable us to learn specialized industry software quickly once we graduate. Furthermore, his emphasis on AI integration highlights how crucial our technical training is for building and leveraging emerging technologies rather than being replaced by them. Ultimately, his insights bridge the gap between our classroom theory and real-world software engineering practices.

Conclusion

In conclusion, interviewing Engr. Gino Sinosin provided invaluable guidance on navigating both our academic years and our future careers in tech. He showed us that technical skills must be paired with adaptability, critical thinking, and continuous upskilling to stay competitive in a rapidly evolving field. Balancing our academic focus with enjoying college life will keep us grounded before entering the demanding workforce. Most importantly, viewing every technical hurdle as a growth opportunity will shape us into resilient computer engineers, effective teammates, and capable leaders.

QUEZON CITY

OCTOBER 22 2026

Dear **Engr.Senosin**,

Good day!

We are currently enrolled in CPE 008 – Computer Engineering as a Discipline under the supervision of Engr. Ji Han Gang at the Technological Institute of the Philippines, Quezon City.

As part of the course requirements, we are tasked to conduct an interview with an alumni Computer Engineer or a professional working in a computer engineering–related field. The goal of this activity is to gain a deeper understanding of the real-world applications of the discipline, the current trends in the industry, and the professional experiences that shape the practice of computer engineering today.

With this, we would like to formally request your permission to conduct a short interview at your most convenient time and platform.

We would be very grateful for your time and insights, which will greatly help us in our understanding of the field and in our professional growth as future Computer Engineers.

Thank you very much for your kind consideration. We look forward to your positive response.

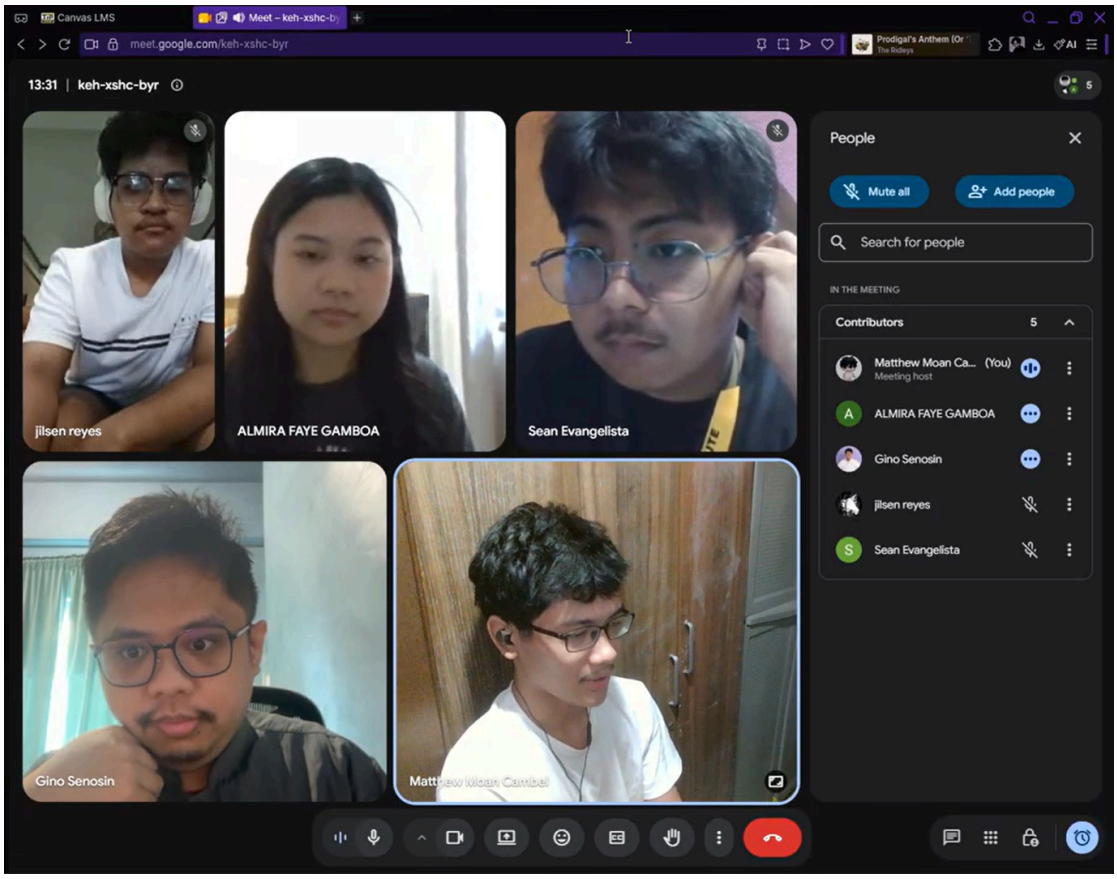

Respectfully yours,

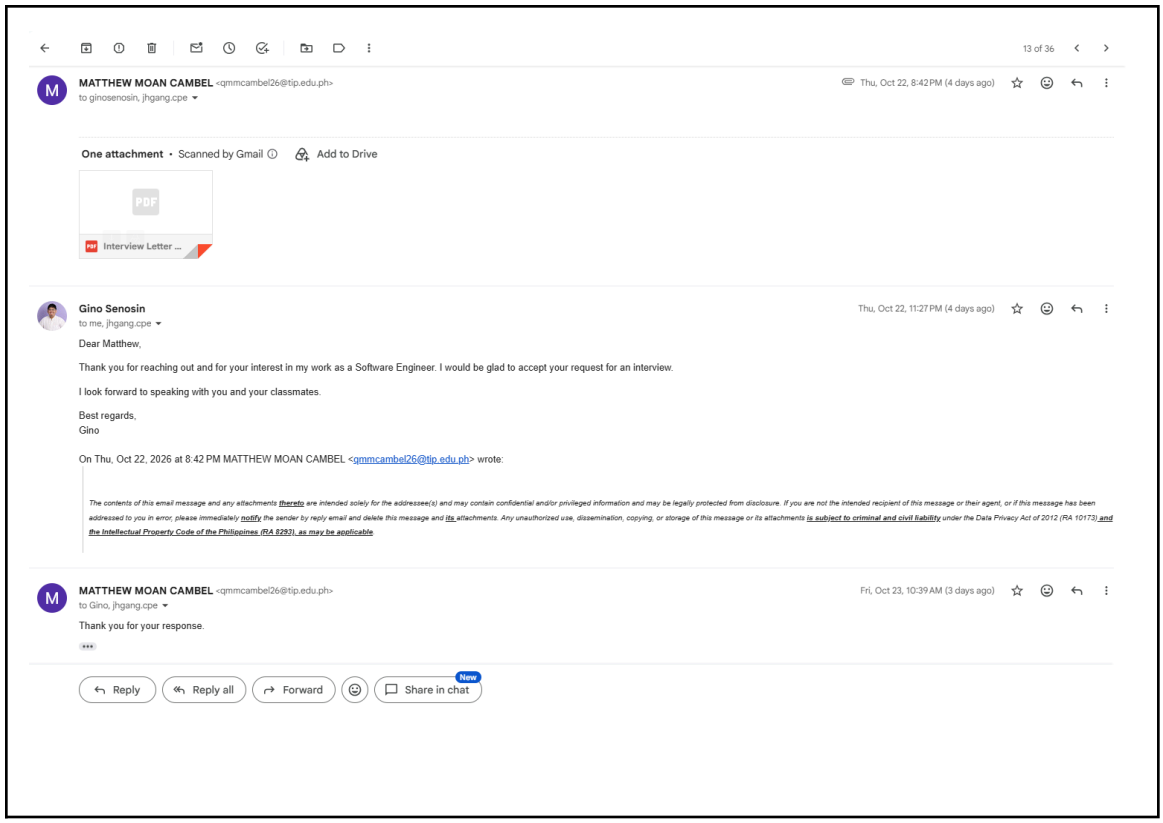

Matthew Cambel

Dear Matthew,

Thank you for reaching out and for your interest in my work as a Software Engineer. I would be glad to accept your request for an interview.

I look forward to speaking with you and your classmates.

Best regards,
Gino
